

# **Multiple Micronutrient Supplements (MMS) for Pregnant Women**

## **Illustrative Roadmap to a National MMS Program**

Washington, D.C  
06 February 2020

Clayton A. Ajello DRPH, MPH

# Topics

- Past *is* prologue: bringing public health innovations into everyday practice
- How MMS introduction to date squares with the historical record
- Getting from here to there: MMS into every day practice: an illustrative roadmap to a national MMS program

# Introduction

# Introduction

Retrospective insights on global introduction of public health interventions:

- **Previous introduction/scaling initiatives:**
  - Oral rehydration therapy
  - Clinical methods of contraception
  - Urgent obstetrical care
- **Process for bringing innovations into everyday practice varies by intervention, health system circumstances, and country factors....but....**
- **There are some common elements in the pathway to introduction and scaling**

# Introduction

## Retrospective insights on global introduction of public health interventions:

- **Evidence first** – raising awareness and advocacy follows
- **International, regional, and domestic professional meetings** – are a critical vehicle for moving national influencers/decision-makers to consider action
- **National stakeholder meetings** – are essential for achieving consensus among national influencers/decision-makers regarding evidence and need, and to create momentum for:
  - Local ownership of the process for change
  - Actions that lead to a recommendation make a change in policy; and formulation and adoption of a policy
  - Program exploration, introduction and scaling

# Introduction

Retrospective insights on global introduction of public health interventions:

- An ***effective*** implementation strategy with a means to measure and review progress and findings – is critical to bring any public health innovation into everyday practice – usually includes:
  - An exploratory period to examine how to introduce and scale the intervention so that it is effective in real world conditions
  - Scaling the intervention in an orderly manner informed by lessons learned during the initial introduction

Where are we now with respect to MMS?

# **MMS – Where We Are Now**

## **Compelling Evidence**

**Efficacy, safety, cost-effectiveness, affordability established**

# **MMS – Where We Are Now**

## **Compelling Evidence**

**Efficacy, safety, cost-effectiveness, affordability established**

## **Enabling Environment**

**Approaches are demonstrated for raising awareness, advocacy, engagement, consensus-building and regulatory support**

# **MMS – Where We Are Now**

## **Compelling Evidence**

**Efficacy, safety, cost-effectiveness, affordability established**

## **Enabling Environment**

**Approaches are demonstrated for raising awareness, advocacy, engagement, consensus-building and regulatory support**

## **Supply**

**“Starter” supplies available; benchmark pricing, quality standards set, initial manufacturing capacity**

# MMS – Where We Are Now

## Compelling Evidence

Efficacy, safety, cost-effectiveness, affordability established

## Enabling Environment

Approaches are demonstrated for raising awareness, advocacy, engagement, consensus-building and regulatory support

## Supply

“Starter” supplies available; benchmark pricing, quality standards set, initial manufacturing capacity

## Implementation/Demand

Effectiveness (adherence) as compared to IFA is a key concern

# MMS – Where We Are Now

## Compelling Evidence

Efficacy, safety, cost-effectiveness, affordability established

## Enabling Environment

Approaches are demonstrated for raising awareness, advocacy, engagement, consensus-building and regulatory support

## Supply

“Starter” supplies available; benchmark pricing, quality standards set, initial manufacturing capacity

## Implementation/Demand

Effectiveness (adherence) as compared to IFA is a key concern

Getting from here to there

# **An Illustrative Roadmap to a National MMS Program**

# National Introduction & Scaling

As we get on the “on-ramp”....consider:

- The roadmap is illustrative only; “high-level” only; and **not** a definitive template. It’s intended to stimulate discussion
- WHO’s evolving position affects intensity of interest, and even whether there is interest to explore MMS
- The “**roadmap**” ≠ country-specific “**implementation strategy**”.  
Several MMS distribution channels exist:
  - Clinic- and community-based ANC services offered by national and NGO health systems
  - Social marketing systems, private practices and pharmacists

Introduction of MMS presents an opportunity to strengthen ANC services; and country-specific strategies need to grapple with **how** MMS introduction can be used to strengthen ANC services

# Roadmap to National MMS Program

Preparatory and Advisory Phase I (months 1 – 12)

Focuses on fostering an enabling environment

# Roadmap to National MMS Program

Preparatory and Advisory Phase I (months 1 – 12)

Focuses on fostering an enabling environment

Introduction Phase II (months 12 – 36)

Focuses on implementation research & advancing procurement relationships

# Roadmap to National MMS Program

Preparatory and Advisory Phase I (months 1 – 12)

Focuses on fostering an enabling environment

Introduction Phase II (months 12 – 36)

Focuses on implementation research & advancing procurement relationships

Scaling Phase III (months 30 onwards)

Focuses on expanding implementation coverage and use

# National Program Roadmap

## Features of roadmap:

- Enables rapid activation of MMS policy while ensuring immediate access to product supplies for **introduction phase**
- Allows time for implementation research to inform scaling – at a time when product availability is limited
- Where domestic manufacturing is sought, affords reasonable time for manufacturers to gear up; and incentivizes manufacturers through early engagement as partners
- Synchronizes program activation with MMS product availability
- Provides a framework through which stakeholders with diverse interests & capabilities can find an entry point for their assistance

# Needs & Gaps: Identifying Where Action is Needed by Global Stakeholders

Enabling Environment

Supply

Demand

# Thank You

Clayton A. Ajello, DRPH, MPH  
Senior Technical Advisor, Vitamin Angels

# Framework for Action

## Framework for action assumes:

- 3- to 5-year time horizon of assistance from global stakeholders
- Targets roughly 15 targeted “sentinel” countries that are “influencer” nations within their region
- Criteria for sentinel countries will need to be defined, but might include that countries have:
  - Self-identified as responsive to assistance as a result of awareness-raising and advocacy initiatives
  - UNICEF country office presence with “convening” stature
  - Reasonable prospect of having qualified local manufacturing or re-packaging capacity
- Opportunistic support is available for other highly motivated countries that seek to adopt MMS
